1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Kasper on 2/3/04.

The application has been amended as follows:

1. (Amended) An adaptive variable-length decoding method for decoding the data coded by an adaptive variable-length coding method whereby quantized orthogonal transform coefficients are scanned in a zigzag pattern, are modified into run, level data and then are variable-length coded in a coding system for image data, said adaptive variable-length coding method comprising the steps of:

setting a plurality of variable-length coding tables having different patterns of a regular region and an escape region according to statistical characteristics of said run, level data;

selecting one of said plurality of variable-length coding tables according to intra/inter mode information of the currently processed block, zigzag scanning position and quantization step size; and

variable-length coding the orthogonal transform coefficients according to said selected variable-length coding table, wherein said selecting step has the selecting range of a plurality of variable-length coding tables having different patterns of a regular region and an escape region according to said intra/inter mode information of the currently Processed block, [said adaptive

variable-length coding method as claimed in claim 1,] in a decoding system for image data, said decoding method comprises the steps of:

setting a plurality of variable-length decoding tables having different patterns of a regular region and an escape region according to statistical characteristics of the run, level data;

inputting intra/inter mode information transmitted from said coding system;

inputting quantization step size transmitted from said coding system;

detecting position information while zigzag-scanning by accumulating run values of run, level data;

selecting one of said plurality of variable-length coding tables according to said intra/inter mode information, quantization step size and position information; and

variable-length decoding the data received according to said selected variable-length coding table.

2. The following is an examiner's statement of reasons for allowance: None of the prior art whether taken singly or in combination teaches using scanning position information to select one of a plurality of variable-length decoding tables. Such claim feature in combination of the remaining features of the claims renders the claims allowable over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
